

ABOUT US

Curasept S.pA was founded in 2001 by former managers of Warner Lambert Consumer Healthcare.

IT IS A PRIVATELY OWNED ITALIAN COMPANY SPECIALISING IN ORAL CARE.

Its offices are located in Via Parini 19, Saronno (VA).

Since its foundation, the Company success is based on the innovation that the R&D team ensures in all the Curasept's products.

The first amazing example of this attitude to progress has been, in 2002, the design and developement of the first innovation in the chlorhexidine market since the 1960s: the ANTI-DISCOLORATION SYSTEM (ADS®) that now is an international patent.

This system revolutionized the sector, by allowing the use of chlorhexidine without one of its well-known side effects, the risk of tooth discoloration.

BY 2005 THIS PRODUCT, CALLED CURASEPT ADS, IT HAD BECOME PRODUCT LEADER OF THE CHLORHEXIDINE MARKET IN PHARMACIES IN ITALY.

But Curasept never stops its research of the best solutions for its patients and stakeholders; for this reason the innovation in the chlorhexidine field continued with a line extension due to the association of hyaluronic acid, chlorobutanol, hamamelis virgininana extract or PVP-VA and colostrum to the chlorhexidine.

IN 2007 A NON-CHLORHEXIDINE DAILY USE MOUTHWASH RANGE WAS LAUNCHED UNDER THE CURASEPT DAYCARE LABEL.

DAYCARE
Non-chlorhexidine
daily use

More recently, in 2016, CURASEPT launched the BIOSMALTO range, a new formula that helps the remineralisation of tooth enamel.

This product, year after year, is becoming closer to the leadership of the remineralization market.

Curasept S.p.A. is a joint stock company, that operates in the oral hygiene sector.

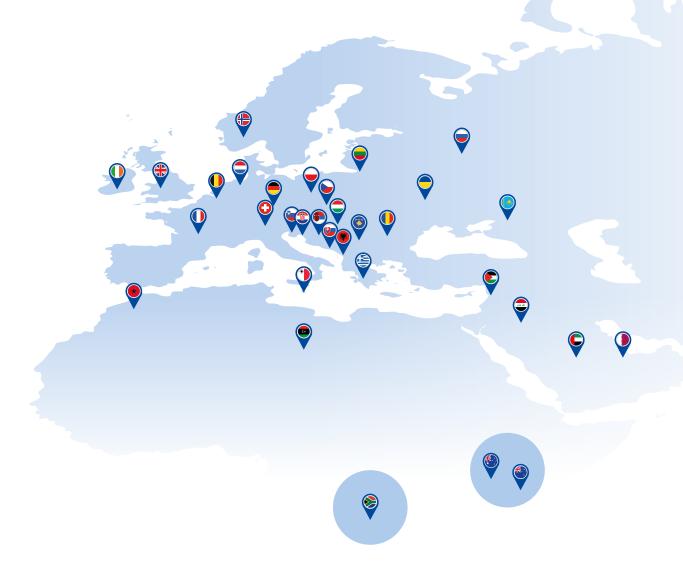

In Italy Curasept sells directly in the dental and through concessionaries in the pharmacy channel being.

#1 COMPANY IN THE CHX MARKET

in pharmacies with

of market share in Italy*.

The Company sells internationally in more than **40** countries through 35 distributors.

CHLORHEXIDINE + ADS

MAXIMUM LEVEL OF EFFICACY AND COMPLIANCE

100% EFFICACY

Chlorhexidine ensures the best bactericidal and anti-plaque action.

COUNTERACTS THE CAUSES AND SYMPTOMS OF PERIODONTAL DISEASE.

100% COMPLIANCE

ADS System counteracts the discolouration caused by prolonged chlorhexidine use.

COUNTERACTS THE MECHANISMS OF DISCOLOURATION.

CURASEPT.

THE ONE AND ONLY

FIRST BECAUSE WE DON'T STAIN

The **ADS System** dramatically reduces dental pigmentation, the most common side effect linked to Chlorhexidine.

+ ADS

Chlorhexidine is at present the most effective mouth antiseptic, as it is considered the "gold standard" in the field. **Tooth pigmentation is possibly the most reported side effect related to the use of Chlorhexidine,** and it can lead to a consistent limit, lowering the patient compliance with the prescribed treatment. In Periodontology, the compliance with the prescribed treatment is however requested for its clinical success, during the active treatment and during management therapy as well.

Curasept S.p.A. developed at the beginning of the year 2000, a patented system called Anti Discoloration System (ADS*), included in the Curasept ADS* line products.

The efficacy of Curasept ADS® against the gingival irritation was confirmed by many in vitro and in vivo studies.

ALCOHOL-FREE

CURASEPT ADS 205MOUTHWASH

Chlorhexidine digluconate 0.05% with ADS and Fluoride 0.05%

Daily plaque and cavity treatment

Protection against bacterial plaque and caries. Respects the natural white of teeth.

CS 02126 - 200 ml

CS 02131 - 75 ml

CURASEPT ADS 705GEL TOOTHPASTE

Chlorhexidine digluconate 0.05% with ADS and Sodium Fluoride 0.05%

Daily plaque and cavity treatment

Protects bums and respects the white colour of teeth.

CURASEPT ADS 350PERIODONTAL GEL TOPICAL GEL

Chlorhexidine digluconate 0.5% with ADS

Indicated as an aid in prolonged topical gum treatment: in dental care, wearers of dentures or dental appliances, in periodontist patients and with implants.

CS 02141 - 30 ml

CURASEPT ORTHODONTIC KIT

Gel 705 Toothpaste Chlorhexidine 0,05% with Fluoride. Oral Rinse 205 Chlorhexidine 0,05% with Floride. Ortho Toothbrush. Perfecto Floss (spongy). Blue Denim clutch bag.

CURASEPT ADS

ALCOHOL-FREE

The classical ADS line is also available in professional formats 5 lt and 900 ml.

Curasept ADS 905 - 912 - 920 MOUTHWASHES

905 Plaque and Cavity Treatment: Chlorhexidine digluconate 0.05% with ADS and Fluoride 0.05%. Protection against bacterial plaque and caries. Daily treatment.

912 Prolonged Treatment: Chlorhexidine digluconate 0.12% with ADS. Protects irritated gums. Strong action against bacterial plaque.

920 Intensive Treatment: Chlorhexidine digluconate 0.20% with ADS.

Very strong action against bacterial plaque.

Curasept ADS 0.20 INTENSIVE TREATMENT MOUTHWASH

Chlorhexidine digluconate 0.20% with ADS.

Treatment for the prevention of post-surgery complications and to decrease the bacterial aerosol.

To be used in sequence after a first rinse with Curasept H_2O_2 .

Curasept ADS 1% PERIODONTAL GEL TOPICAL GUM TREATMENT

Chlorhexidine digluconate 1% with PVP-VA and ADS.

Topical treatment for gums to relieve soreness during dental therapy, for wearers od dentures or othodontic brace, and for person with periodontal disease or with implants.

It also helps prevent the formation and depositing of dental plaque.

SODIUM DNA:

What is and how it works.

DNA SODIUM OR PDRN (PolyDeoxyRiboNucleotide) SODIUM SALT, IT IS CONSTITUTED FROM A MIXTURE OF DNA FRAGMENTS WITH MOLECULAR WEIGHT FROM 250 TO 500 KDA.

The mechanism of action of Sodium DNA involves two processes:

1 Interaction with A2a adenosine receptors*

It provides an anti-inflammatory action and modulates multiple cellular inflammatory mediators.

2 "salvage pathway"*

Nucleotide salvage pathways are used to recover bases and nucleosides that are formed during degradation of RNA and DNA. Through this pathway the sodium DNA, through, pinocytosis, is internalized into the cell. Then, these polynucleotides are depolymerized into smaller molecules that enter into the nucleus and are used to synthesize other substances for the cell survival and the support of the regnerative processes.

CURASEPT H₂O₂

CURASEPT

Curasept, according with the recommendations of the Italian Ministry of Health, the guidelines of the Sector Associations and what can be found in the literature, is able to provide Dental Clinics with the solutions required for compliance with the procedures for operating in full safety.

Four active principles against SARS-CoV-2 are taken into account in mouthwashes:

- Hydrogen Peroxide
- Chlorhexidine
- Cetylpyridinium Chloride
- Povidone-Iodine

For the latter, due to its taste, use in the oral cavity is not well tolerated by the patient and the simultaneous use of other products is not recommended due to possible interactions and side effects.

The pre-surgery mouthwash protocol includes:

Curasept H₂O₂ PROFESSIONAL USE MOUTHWASH

A first 30-second rinse with a 1% Hydrogen Peroxide solution with gargles.

Hydrogen peroxide can inactivate the SARS-CoV-2 virus through oxidative action.

Its use is recommended in various articles and in the "Handbook of COVID-19 Prevention and Treatment", one of the first guides for the management of the emergency, although these publications are based mostly on the analyses of the action on the surfaces of the environment.

CURASEPT. AFTERAPID

QUICK RELIEF, QUICK HEALING.

It forms a lipid-protective film on the wound.

RELIEVES pain quickly

STIMULATES cellular repair

ACCELERATES healing

CURASEPT AFTERAPID

Formula based on the emulsion of mucoadhesive polymers enriched by unique active ingredients: BIOMOIST (hyaluronic acid), tea tree oil, Manuka oil, 18 beta glycyrretinic acid, ruscogenin, DNA/RNA, allantoin.

THE BENEFITS:

Relieves pain, protects, and moisturises the lesion.

It does not alter the perception of flavours.

Vegan-Friendly formula.

Speeds up healing.

Alcohol-free, does not burn and does not irritate.

Effective from the first use.

Curasept Afterapid MOUTHWASH

Ideal for widespread action in case of multiple lesions and recurring mouth ulcers.

Use in combination with the Gel is recommended to enhance the action.

Patented emulsion.

Curasept Afterapid PROTECTIVE GEL

Ideal for local action in the presence of single or small mouth ulcers.

Curasept Afterapid SPRAY

Ideal for targeted action in hard-to-reach areas. Use in combination with the Gel is recommended to enhance the action.

CURASEPT PREVENT

PROTECTION AND PREVENTION LINE FOR THE MAINTENANCE OF IMPLANTS

IDEAL ALSO WHEN THE FOLLOWING RISK FACTORS ARE PRESENT.

CURASEPT PREVENT

Curasept Prevent MOUTHWASH

Rebalances the oral microbiota and improves gingival tissue health even in cases of pre-existing gingival pathologies.

Use twice a day.

CS 02451 - 300 ml Bottle

Curasept Prevent TOOTHPASTE

Rebalances the oral microbiota and improves gingival tissue health even in cases of pre-existing gingival pathologies.

Use twice a day.

CS 02450 - 75 ml Tube

Curasept Prevent GEL

It creates a protective barrier in a target site counteractig the proliferation of the biofilm and bacterial plaque.

Apply 2 - 3 times a day and use in association with Prevent toothpaste.

CS 02452 - 30 ml Tube

Curasept Prevent PROBIOTICS FOOD SUPPLEMENT

Gluten-free food supplement that activates the synergy between probiotic bacteria:

- Bifidobacterium Lactis HN019: has the ability to improve the outcomes of periodontal therapy and rebalance the microbiota.
- Kluyveromyces Marxianus Fragilis B0399: plays a antihalitosis function, one of the most frequent effects in patients with gum problems. Also contains Colostrum and Biotin for mucosal protection.

Take 1 or 2 tablets a day on an empty stomach 30 days. Repeat the treatment after two months.

CS 02453 - 14 chewable tablets

CURASEPT DAYCARE PROTECTION BOOSTER

Boost your daily oral care.

4 toothpastes to boost your daily oral routine.

A NEW PATENT:

- CPC-HAP (Cetylpyridinium Chloride + Hydroxyapatite);
- NaF (Sodium Fluoride);
- Essential Oils: Menthol, Eucalyptol, Thymol, Methyl Salicylate.

SLS FREE.

BENEFITS:

- Fight caries and gum disturbances
- Fight halitosis
- · Remineralized action
- Prolonged hygiene action.

A UNIQUE APPROACH

3 PATENTS

3 FUNCTIONAL SUBSTANCES

BIOMIMETIC ACTIVITY

The functional substances contained in Curasept Biosmalto have chemical, physical, morphological and mechanical properties similar to the naturally occurring biological structures (enamel and dentine). In a physiological environment, these substances can stimulate processes, such as remineralisation, that are similar to those occurring in the presence of a natural biological tissue.

BIOCOMPATIBILITY

Curasept Biosmalto is used for a specific biomedical application without causing toxic effects on the biological system.

BIOACTIVITY

Curasept Biosmalto is capable of interacting chemically with dental hard tissues, by depositing a new mineral phase in continuity with the existing one.

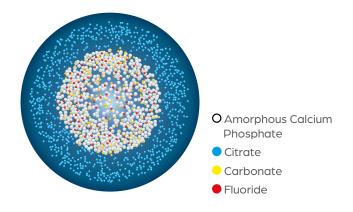

IMPACT ACTION MOUSSE

CHARACTERISTICS OF THE FUNCTIONAL SUBSTANCES

BIO-INSPIRED TECHNOLOGY

Citrate outer layer nanoparticle of amorphous calcium phosphate enriched with carbonate and fluoride.

AMORPHOUS CALCIUM PHOSPHATE (ACP) PHASE

functionalised with Fluoride and Carbonate, coated with Citrate.

Amorphous Calcium Phosphate (ACP) phase functionalised with Fluoride and Carbonate, coated with Citrate.

Amorphous Calcium Phosphate (ACP) is a non-crystalline, highly reactive material **THAT IS RAPIDLY CONVERTED** into hydroxyapatite: it is the natural precursor of enamel and dentine.

CITRATE

is essential for maintaining healthy and strong teeth. It covers F-ACP particles externally, stabilises the complex, and makes it more biomimetic.

CARBONATE

increases the complex solubility and the bioavailability of the active ions: Calcium, Phosphate and Fluoride.

FLUORIDE

is present in free form within the complex. It contributes to the formation of Fluorapatite.

CURASEPT BIOSMALTO

CURASEPT BIOSMALTO

Mousse

Caries, Abrasion & Erosion **IMPACT ACTION MOUSSE** PROFESSIONAL USE

F-ACP • • • • • **COMPLEX**®

Amorphous Calcium Phosphate phase - ACP - functionalised with Fluoride, Carbonate coated with Citrate.

For frequent cavities, high wear of teeth surfaces and dry mouth. It re-mineralises the enamel and increases resistance to acid, mechanical and bacterial attacks. Post orthodontic and whitening treatments. Adjuvant in the treatment of white spots and MIH.

- Flavours: Delicate Mint, Strawberry

1450 ppm F

Caries, Abrasion & Erosion KIT STUDIO PROFESSIONAL USE

Contains

1: 150 ml mousse, 1: protocol of use, 10: large dental trays and 10: medium dental trays.

- Flavours: Delicate Mint, Strawberry

Sensitive Teeth IMPACT ACTION MOUSSE PROFESSIONAL USE

Amorphous Calcium Phosphate phase - ACP functionalised with Fluoride, Carbonate coated with Citrate and Potassium Salts.

Quickly reduces pain, occludes the dentinal tubules, protects against sensitivity over time and quickly re-mineralises enamel and dentin.

- All Fruits flavour

1450 ppm F

CURASEPT BIOSMALTO

CURASEPT. BIOSMALTO

Mousse

Caries, Abrasion & Erosion IMPACT ACTION MOUSSE HOMECARE

Amorphous Calcium Phosphate phase - ACP - functionalised with Fluoride, Carbonate coated with Citrate.

It is indicated for patients with heightened de-mineralisation. It can be prescribed as continuation of the professional treatment or even without treatment in the office, in combination with a toothpaste of the line.

- Flavours: Delicate Mint, Strawberry

1450 ppm F

Sensitive Teeth IMPACT ACTION MOUSSE HOMECARE

Amorphous Calcium Phosphate phase - ACP - functionalised with Fluoride, Carbonate coated with Citrate and Potassium Salts.

It is indicated for patients with sensitivity in acute severe phase. It can be prescribed as continuation of the professional treatment or even without treatment in the office, in combination with a toothpaste of the line.

- All Fruits flavour

1450 ppm F⁻

MOUTHWASHES & TOOTHPASTES

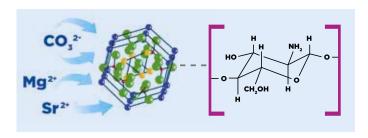

CHARACTERISTICS OF THE FUNCTIONAL SUBSTANCES

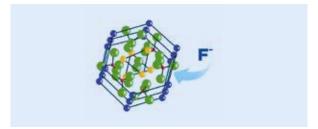

Hydroxyapatite partially substituted and conjugated with Chitosan

Hydroxyapatite partially substituted and conjugated with **Chitosan + Fluoride**

BIOMIMETIC TECHNOLOGY:

Mixture of biomimetic HYDROXYAPATITES

- Partially Magnesium-, Strontium-, Carbonate-substituted Hydroxyapatite CONJUGATED WITH CHITOSAN.
- Partially Fluoride-substituted Hydroxyapatite.

Chitosan affinity with enamel facilitates the release of active ions directly to the surfaces of the teeth.

CARBONATE

Can make active ions bioavailable.

MAGNESIUM

Promotes nucleation.

STRONTIUM

Stabilises the newly-formed mineral phase.

CHITOSAN

Prolongs the release of the active components.

FLUORIDE

Strengthens the newly-formed mineral phase.

Sensitive Teeth

Curasept Biosmalto Sensitive Teeth reduces tooth sensitivity rapidly and it creates a new mineral phase that is more resistant to acid attacks and occludes exposed dentinal tubules.

It remineralises enamel and dentine. It occludes the dentinal tubules, rapidly reducing the sensitivity and pain.

Curasept Biosmalto Sensitive Teeth MOUTHWASH

Hydroxyapatite partially substituted and conjugated with Chitosan + Fluorohydroxyapatite and Potassium Salts.

250 ppm F

Curasept Biosmalto Sensitive Teeth TOOTHPASTE

Hydroxyapatite partially substituted and conjugated with Chitosan + Fluorohydroxyapatite and Potassium Salts.

Low abrasivity: < 15

1450 ppm F

Curasept Biosmalto Sensitive Teeth SENSITIVE TOOTBRUSH

It is especially designed for subjects with dentine sensitivity and delicate gums.

It is the ideal tool to complement BIOSMALTO Sensitive Teeth products.

The conical bristles effectively break down bacterial plaque without traumatising the gums and abrading the enamel.

Caries Abrasion & Erosion

Curasept Caries Abrasion & Erosion acts strongly on abrasion and erosion damage and creates a new, more resistant mineral phase.

Curasept Biosmalto Caries Abrasion & Erosion MOUTHWASH

Hydroxyapatite partially substituted and conjugated with Chitosan + Fluorohydroxyapatite.

250 ppm F

Curasept Biosmalto Caries Abrasion & Erosion TOOTHPASTE

Hydroxyapatite partially substituted and conjugated with Chitosan + Fluorohydroxyapatite.

1450 ppm F⁻

Curasept Biosmalto Caries Abrasion & Erosion PROTECTION TOOTHBRUSH

It is recommended to use together with BIOSMALTO Caries Abrasion & Erosion products. It has a reduced-size head and soft, thin and flexible bristles that offer highly effective plaque removal already at the first step, without abrading the enamel.

Curasept Biosmalto PROBIOTICS FOOD SUPPLEMENT

Bacillus Coaugulans BC4, Vitamin B6, Vitamin B12, Folic Acid.

The Probiotic re-balances the oral microbiota and riboflavin preserves the health of the gingival tissues and of the oral mucosa.

Daily use: 1 or 2 tablets per day under fasting for 1 month. Repeat the treatment after 2 months.

Curasept Biosmalto Caries Abrasion & Erosion 6 MONTHS-12 YEARS

Oral hygiene is paramount from the eruption of the first tooth. Using suitable toothpastes and toothbrushes. Especially from six months to six years, fluoroprophylaxis must be carried out using toothpastes containing at least one thousand parts per million of fluoride (1,000 ppm).

Professionals recommend brushing your teeth at least twice a day with a pea-size amount of fluoride. After the age of six, dentists in Italy recommend at least 1,000 ppm quantity of fluoride twice a day with a "classic" dose of toothpaste. Every toothpaste has an RDA index (Relative Dentin Abrasivity). Professionals recommend using a toothpaste with a low rate RDA (lower than 50) so as not to damage enamel.

Caries Abrasion & Erosion BABY-KID (6 months-6 years) TOOTHPASTE WITHOUT FLUORIDE

Flow RDA abrasiveness: <30.

For children taking Fluoride Tablets.

- Strawberry flavour

WITHOUT FLUORIDE

Caries Abrasion & Erosion BABY-KID (6 months-6 years) **TOOTHPASTE**

Flow RDA abrasiveness: <30.

Prevents tooth decay for milk teeth. Guarantees healthy permanent teeth. Protects and remineralises enamel and dentin. Protects against acid erosion and abrasion.

- Flavours: Delicate Mint, Strawberry

1000 ppm F

Caries Abrasion & Erosion JUNIOR (7-12 years) **TOOTHPASTE**

Flow RDA abrasiveness: <30.

Prevents caries and inhibits the formation of plaque deposits on permanent teeth. Protects and remineralises the hard tissues of newly erupted teeth. Protects against acid erosion and abrasion. Prevents dentin sensitivity.

- All Fruits flavour

1450 ppm F

Curasept Biosmalto Caries Abrasion & Erosion TOOTHBRUSHES 0-12 YEARS

Baby, Kid and Junior, three toothbrushes designed for 3 specific age groups and with features specifically designed to help children learn the correct way to perform the daily mechanical oral hygiene operations.

Caries Abrasion & Erosion BABY TOOTHBRUSH 0 - 3 YEARS

Soft and flexible bristles that protect gums and teeth from plaque deposits.

Coloured bristles mark the amount of toothpaste to use.

Available in 2 colours:

Caries Abrasion & Erosion KID TOOTHBRUSH 3-6 YEARS

Soft and flexible bristles that protect gums and teeth from plaque deposits. Coloured bristles mark the amount of toothpaste to use. The small rounded head reaches every corner of the mouth.

Available in 3 colours:

Caries Abrasion & Erosion JUNIOR TOOTHBRUSH 7 - 12 YEARS

Ideal for young people from 7 to 12 years old. A toothbrush that helps prevent tooth decay by removing plaque deposits.

Flexible and compact bristles clean the surfaces of deciduous and permanent teeth without damaging them.

CURASEPT PRIMI DENTI

The teething process can cause considerable discomfort and it is important to choose the right product. CURASEPT PRIMI DENTI is the ready-to-relief gel with high tolerability and no side effects, indicated in the presence of the typical symptoms of the first dentition:

- Gum inflammation
- Gum pain
- Hypersalivation

Thanks to the exclusive combination of natural ingredients marigold, mallow and hyaluronic acid CURASEPT PRIMI DENTI quickly relieves gum pain and irritated mucous membranes, speeds up the healing process, reduces swelling in irritated mucous membranes. CURASEPT PRIMI DENTI GUM MASSAGER gives relief with its soft silicone bristles. Its unique shape not only massages gums but also cleans baby teeth.

Curasept Primi Denti TEETHING GEL

Teething gel with natural elements and does not contain:

- local anaesthetics
- sugars
- alcohol

Glucose, fructose, sucrose can cause tooth decay.

- **5 EASY RECOGNITION:** the size of the interdental brush is printed on the handle.

SAFEFOR MANY REASONS

BLISTER PACKS

The Curasept Proxi interdental brushes feature renewed graphic design and a new package for the "straight interdental brush" range.

The new 6 PIECES blister pack can be easily separated in 2 sections:
plastic front and paper back.

This makes it **easier to open**

the package and obviously
HELPS WITH PROPER
SEPARATE DISPOSAL.

The 6 interdental brushes are inserted in a base in recycled material which acts as handy holder.

It can in fact be placed anywhere and holds the brushes upright, separate from one another and from any surfaces,

thus ASSURING THE UTMOST HYGIENE AND CONVENIENCE OF USE.

Prevention

Indicated for narrow interdental spaces and in the presence of healthy gums.

The Prevention Line is made up of 5 references that range from the thinnest ISO 0 (0.6 mm) to ISO 3 (1.1 mm).

The same measures are also available in the ANGLE version.

CURASEPT.

CURASEPT PROXI

CURASEPT.

AFTER ONE BRUSH, YOU'RE HOOKED!

- ANATOMYCAL SHAPE to reach narrow spaces and stop traumatic brushing.
- HIGH CLEANING ABILITY thanks to numerous and soft polyester bristles.
- 3, NO TRAUMATIC BRUSHING
- **4 RUBBER INSERTS** for safety brushing.

CURASEPT. SOFTLINE

Thanks to the Soft Touch System technology, CURASEPT SOFT anti-plaque toothbrushes remove and break down plaque much more effectively than traditional toothbrushes.

SOFT TOUCH SYSTEM

A novel system consisting of soft, flexible, numerous, compact bristles.

The high quality of polyester filaments combined with the softness and density GRADE ensure a superior cleaning capacity without damaging the gums and tooth tissues.

HIGHLY EFFECTIVE, HIGHLY ATRAUMATIC

The CURASEPT SOFT toothbrush line was designed to prevent the gingival lesions caused by an incorrect brushing, thanks to the use of soft and flexible bristles that offer unique gentleness and cleanliness.

Various degrees of softness so that you can choose the one that is most suitable to the needs of your patients.

Medical	Maxi Soft 010	Extra Soft 012	Soft 015	Medium 017	
Long Head	Short Head				
Bristles per tuft					
~ 150	~ 150	~ 110	~ 80	~ 50	
Bristle diameter

CURASEPT SPECIALIST TOOTHBRUSHES are designed to give a targeted response to special situations and problems.

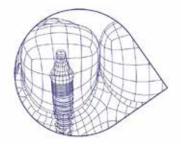

ORTHO

In the presence of fixed orthodontic appliances.

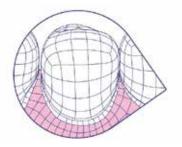

MONO TUFT

For particularly large interdental spaces, prosthetic rehabilitations, malposition of tooth elements, and surfaces with deep erosions.

IMPLANT

In the presence of complex prosthetic rehabilitations, in particular on dental implants.

SURGICAL

For oral hygiene in the very first days after surgery or in the presence of gingival lesions.

CURASEPT SPECIALIST

Curasept Specialist ORTHO - TOOTHBRUSH

It was designed to allow thorough oral hygiene in the presence of orthodontic appliances. The bristles are entirely covered by soft particles that make the surface irregular, and help achieving an effective cleaning without damaging the enamel. The "V" profile cut of the bristles is designed to optimize cleaning. The shorter central rows act on attachments, wires, bands and anchorages. The longer outer rows clean the surface of the teeth.

Available in 3 colours:

Curasept Specialist MONO TUFT - TOOTHBRUSH

SHORT and LONG Mono Tuft brushes differ in bristle lengths. Both brushes have a single circular tuft with a conical shape, consisting of soft and flexible bristles. The inclination of the head, the ergonomic handle and the gentleness of the bristles make them the ideal tools in specific situations such as:

- Oral hygiene in the presence of implants, bridges and orthodontic appliances;
- Hygiene of hard-to-reach areas;
- Cleaning of gingival sulcus;
- Cleaning of isolated teeth.
- SHORT LONG

Curasept Specialist IMPLANT - TOOTHBRUSH

Thanks to its particular shape, the ergonomic handle and the flexible, soft bristles, the IMPLANT toothbrush is the ideal tool for the HYGIENE OF IMPLANT-SUPPORTED PROSTHESES. The high quality of the materials prevents damages to the surfaces of implants and prostheses.

Curasept Specialist SURGICAL - TOOTHBRUSH

The SURGICAL toothbrush is particularly indicated after surgery or implantology, periodontal treatments, heightened sensitivity due to injury and exposed root surfaces. It has a narrower head than the standard heads. Thanks to its small size and the anatomical shape, allows easier access to the less accessible points of the teeth, acting in a specific way without causing trauma. Extremely soft bristles with a diameter of 0.06 are specially indicated for a gentle and atraumatic cleansing.

Available in 2 colours:

CURASEPT FLOSSLINE

Dental Flosses

Dental floss should be used in addition to the toothbrush and the interdental brush to remove the bacterial plaque from the contact points and the gingival sulcus, and from the narrower gaps that even the smallest interdental brush is unable to reach.

PERFECTO

Professional Floss is equipped with an ultra-rigid threader and a soft spongy section.

At the contact with saliva and dental surfaces, the wire guide does not bend facilitating insertion between the teeth, while the spongy part expands adapting perfectly to interdental spaces.

The porosity of the microfibre guarantees greater plaque removal and optimal cleaning while still being delicate on the gums. The shell shaped dispenser combines practicality, hygiene and portability.

CURASEPT FLOSSLINE

Dental Flosses

Curasept TAPE DENTAL FLOSS

It does not shred, and ensures optimum sliding properties.

This flat section floss facilitates the insertion into narrow interdental spaces.

CS 07136 - Dispenser 35 m

Curasept PTFE DENTAL FLOSS

It is made of a high-resistant material that does not shred, and ensures optimum sliding properties. Due to its particular cleaning action, it is indicated for narrow interdental spaces and for people who use a floss for the first time.

CS 07137 - Dispenser 35 m

Curasept CLASSIC DENTAL FLOSS

It is coated with a special microcrystalline wax that allows for easier sliding between the teeth, and ensures an effective cleaning action thanks to an easier insertion into the interdental spaces.

CS 07138 - Dispenser 50 m

- Mint flavour

Curasept
ULTRAFINE
DENTAL FLOSS

It consists of over 100 compact microfilaments that guarantee greater resistance, elasticity, and effective cleaning of interdental spaces.

CS 07139 - Dispenser 50 m

CURASEPT FLOSSLINE

Dental Flosses

CS 07140 - Dispenser 50 m

Curasept **BLACK DENTAL FLOSS**

It is flat, made of polyester, and coated with a special microcrystalline wax that allows for easier sliding between the teeth, increases dental floss resistance, and facilitates the insertion into the interdental spaces. The black colour makes plaque and residues more visible when removed, and allows better control of the cleaning action.

- Mint flavour

CS 07141 - Dispenser 30 m

Curasept **EXPANDING DENTAL FLOSS**

Thanks to the contact with the dental surfaces during its use, the floss expands and adapts perfectly to the interdental spaces.

The greater volume of the floss resulting from the expansion of the microfibres allows better hygiene while remaining gentle on gums. The porosity of the microfibres ensures more effective plaque removal.

- Mint flavour

CURASEPT ECOBIO

Bio certified daily oral hygiene

ALCOHOL-FREE

Toothbrush made with wood from European forests with certified management. Ergonomic handle and soft bristles confer excellent comfort of use.

Completely made in Italy.

CURASEPT WHITENING

CURASEPT WHITENING

Whiteners for home use

Curasept Whitening is the line of home dental whiteners consisting of mouthwash, toothpaste and toothbrush indicated for maintaining the results obtained with the professional treatment carried out in the dentist's office.

The use of the products synergistically makes the most of the substances they contain, so as to contribute to the removal of stains that undermine the beauty of the smile.

Curasept Whitening MOUTHWASH

It is recommended for those who, in addition to proper oral hygiene, want to maintain the natural whiteness of their teeth. Carbamide Peroxide acts effectively on teeth discolouration with a long-lasting effect. Phytic Acid maintains whitening because it acts as a calcium chelating agent, the Essential Oils provide significant benefits for complete protection and perform an anti-plaque and anti-halitosis action.

Curasept Whitening TOOTHPASTE

A formula based on PVP-Hydrogen Peroxide, effective against external enamel discolouration. The micronised silicas act gently on the enamel and help remove surface stains.

The combination of two Fluorine Salts, Fluoride and Sodium Monofluorophosphate, carries out a re-mineralising action and increases the natural structural resistance to caries.

Curasept Whitening TOOTHBRUSH

DUAL BRISTLE TECHNOLOGY.

The Calcium Carbonate contained in the middle bristles contributes to the removal of plague and extrinsic enamel stains.

The Microrelief makes the surface of the side bristles uneven, enhancing the cleaning and whitening action.

Available in 4 colours:

CURASEPT LUXURY WHITENING

Advanced whitening technology

CURASEPT LUXURY WHITENING
